Testing Your Drinking Water

Even if you know your service line is not lead, lead can be found in other plumbing materials and faucets. Testing your drinking water is the only way to confirm if lead is present. Since each home has different plumbing, pipes, and materials, test results are likely to be different for each home.

Some states or utilities offer programs to pay for water testing and/or lead service line replacement for residents. Contact your state or local water company for more information.

U.S. EPA recommends sending samples to a certified laboratory for analysis. Testing costs between $20.00 and $275.00. Certified laboratories for testing are available by contacting your state or your local drinking water company. Carefully follow the directions of the certified laboratory for collecting the water sample and collect the sample from faucets where you drink.
